

Brian Wonjun Lee

Philadelphia, PA | 215-294-7152 | leebwj@sas.upenn.edu | leebrian.dev | [LinkedIn](#)

EDUCATION

University of Pennsylvania

MSE in Computer Graphics & Game Technology (CGGT), Submatriculation
BA in Computer Science & Design (Double Major), Benjamin Franklin Scholars

Philadelphia, PA

Expected May 2028

Expected May 2027

Relevant Coursework: Interactive Computer Graphics, Computer Animation, 3-D Computer Modeling, Introduction to Algorithms, Introduction to Computer Systems, Programming Languages & Techniques

EXPERIENCE

Software Engineer Intern, Aleph Lab (Y Combinator)

June 2026 – Aug 2026 · San Francisco (Remote)

- Delivered an app-wide **React Native** redesign from Figma to production, sequencing the information architecture ahead of the visual system so users kept their bearings through the change — a **33-section** design system shipped across **13 feature-flagged PRs** against a **3,748-test** regression gate
- Turned a channel that went dark whenever nobody approved a send into one that runs itself** — proposing, clearing its own guardrails and reaching **91% of targeted devices** with **no human in the loop**
- Produced the first revenue the win-back ever generated**, and reached **~2.7× more users** after proving the eligibility logic had excluded most of its intended audience
- Made a children's app safe from notification injection** — anyone with a user ID could push arbitrary content until I bearer-authed four public endpoints, **zero caller changes**

Software Engineer Intern, BitMango (Puzzle1 Studio)

June 2025 – Aug 2025 · Pangyo, South Korea

- Maintained a live portfolio of **50+ Unity mobile game titles**, improving UI/UX and core gameplay stability across releases
- Resolved **100+ QA-reported bugs** by modifying Unity prefabs and C# scripts, shipping fixes in production releases
- Upgraded SDKs and platform modules fleet-wide to meet evolving app-store requirements and sustain production availability

Project Lead & Product Designer, Penn Spark

Jan 2025 – Present · Philadelphia, PA

- Led a cross-functional team of **15+ designers and developers** to ship client-facing **0-to-1 products**
- Defined end-to-end user flows, interaction patterns, and reusable interface systems across multiple deliverables
- Shipped polished, user-centered features across semester-long client project cycles

Military Interpreter, Capital Defense Command (ROK Army)

Dec 2022 – June 2024 · Seoul, South Korea

- Provided real-time English–Korean interpretation in high-security, multi-agency environments for international stakeholders
- Translated sensitive documents and briefings with precision, enabling coordination across government and defense teams

Database Engineer Intern, IT-Farm

June 2022 – Aug 2022 · Seongnam, South Korea

- Designed and implemented a SQL database prototype managing **1M+ data entities** using Oracle and SQLite
- Processed and organized semiconductor datasets from **20+ client companies**, including Samsung, SK, and LG
- Wrote and optimized SQL queries to improve retrieval and management efficiency across large-scale datasets

PROJECTS

Mini Minecraft | C++, OpenGL, GLSL

Apr 2026

- Made a from-scratch voxel world read as varied rather than noisy** — **7-biome procedural generation** (Perlin/FBM/Voronoi) and **3D Perlin caves** in a C++/OpenGL engine (team of 3)
- Made that world legible** — the GLSL pipeline I owned: PCF shadows, screen-space reflections, vertex AO, day-night cycle

Passenger | Unreal Engine 5, HLSL, Maya

Mar 2026 – Apr 2026

- Gave a short film its entire visual identity** — **2 HLSL post-process shaders** (anisotropic Kuwahara, cell shader) over GBuffer channels, delivered as a ray-traced 2560×1080 render
- Brought its character to life** — rigged and animated in Maya (IK limbs, spline-IK spine) driving an Unreal Animation Blueprint

Mini Maya | C++, OpenGL, Qt

Feb 2026 – Mar 2026

- Made arbitrary meshes editable in place** — a **half-edge structure** giving topology-aware traversal, plus an OBJ parser accepting arbitrary n-gons, rendered via OpenGL VBOs
- Turned coarse geometry into smooth surfaces** with **Catmull–Clark subdivision** and topology ops (split, extrusion, triangulation) in a Qt editor

TECHNICAL SKILLS

Game Engines: Unity, Unreal Engine 5, C#, C++, Animation Blueprints, prefab & gameplay systems

Graphics & 3D: OpenGL, GLSL, HLSL, Maya, Blender, Substance Painter

Languages: C++, C#, Python, TypeScript, JavaScript, Java, Kotlin, SQL

Frameworks, Infra & AI: React Three Fiber, React Native (Expo), Minecraft modding, Git, Docker, Claude Code, Codex, MCP

Practices: Trunk-based development, feature flags & staged rollout, CI/CD, code review, unit & regression testing
