

Brian Wonjun Lee

Philadelphia, PA | 215-294-7152 | leebwj@sas.upenn.edu | leebrian.dev | [LinkedIn](#)

EDUCATION

University of Pennsylvania

MSE in Computer Graphics & Game Technology (CGGT), Submatriculation
BA in Computer Science & Design (Double Major), Benjamin Franklin Scholars

Philadelphia, PA
Expected May 2028
Expected May 2027

Relevant Coursework: Interactive Computer Graphics, Computer Animation, 3-D Computer Modeling, Introduction to Algorithms, Introduction to Computer Systems, Programming Languages & Techniques

EXPERIENCE

Software Engineer Intern, Aleph Lab (Y Combinator)

June 2026 – Aug 2026 · San Francisco (Remote)

- **Shipped a mobile redesign to production users** behind a feature flag — a five-PR stack merged in order, held byte-identical with the flag off and cleared against a **2,009-test** regression suite before going live
- Built a push-notification retention system (Supabase, Deno edge functions, FCM) with a treatment/holdout A/B, then **automated it end to end** — it proposes, approves against guardrails and sends with **no human in the loop** at **91% delivery**
- Drove the **first revenue conversion** the win-back channel ever produced, and grew reachable users **~2.7x** after finding the eligibility logic had silently excluded most of the intended audience
- Closed a vulnerability letting anyone with a user ID **inject push notifications into a children's app** — bearer-authenticated four public endpoints with **zero caller changes**, each proven against live traffic first

Software Engineer Intern, BitMango (Puzzle1 Studio)

June 2025 – Aug 2025 · Pangyo, South Korea

- Maintained a live portfolio of **50+ Unity mobile game titles**, improving UI/UX and core gameplay stability across releases
- Resolved **100+ QA-reported bugs** by modifying Unity prefabs and C# scripts, shipping fixes in production releases
- Upgraded SDKs and platform modules fleet-wide to meet evolving app-store requirements and sustain production availability

Project Lead & Product Designer, Penn Spark

Jan 2025 – Present · Philadelphia, PA

- Led a cross-functional team of **15+** designers and developers to ship client-facing **0-to-1 products**
- Defined end-to-end user flows, interaction patterns, and reusable interface systems across multiple deliverables
- Shipped polished, user-centered features across semester-long client project cycles

Military Interpreter, Capital Defense Command (ROK Army)

Dec 2022 – June 2024 · Seoul, South Korea

- Provided real-time English–Korean interpretation in high-security, multi-agency environments for international stakeholders
- Translated sensitive documents and briefings with precision, enabling coordination across government and defense teams

Database Engineer Intern, IT-Farm

June 2022 – Aug 2022 · Seongnam, South Korea

- Designed and implemented a SQL database prototype managing **1M+ data entities** using Oracle and SQLite
- Processed and organized semiconductor datasets from **20+ client companies**, including Samsung, SK, and LG
- Wrote and optimized SQL queries to improve retrieval and management efficiency across large-scale datasets

PROJECTS

Capsule | React, Three.js (R3F), Blender

Jan 2025 – Apr 2025

- Built the **interactive 3D gallery** in React Three Fiber for a collaborative time-capsule web app (team of 4) — real-time rendering, animation, and direct-manipulation placement of media in 3D
- Owned the product's **front-end UI and interaction design** across the create → contribute → unlock flow

Mini Maya | C++, OpenGL, Qt

Feb 2026 – Mar 2026

- Implemented a **half-edge mesh data structure** (Face/HalfEdge/Vertex, smart-pointer ownership) for topology-aware traversal and editing
- Wrote an **OBJ parser** that builds the mesh from arbitrary n-gon inputs, rendered via OpenGL VBOs
- Implemented **Catmull–Clark subdivision** and topology ops (split, extrusion, triangulation) in a Qt editor

Mini Minecraft | C++, OpenGL, GLSL

Apr 2026

- Built **7-biome procedural world generation** for a from-scratch voxel engine (team of 3) — Perlin/FBM/Voronoi noise with smoothstep blending
- Carved **3D Perlin-noise caves** and post-process water/lava overlays via a framebuffer pass
- Engineered the GLSL **render pipeline** — PCF shadow mapping, screen-space reflections, vertex AO, and a day-night cycle

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python, Java, C++, C#, SQL, HTML/CSS, OCaml

Frameworks & Libraries: React, Next.js, Node.js, Astro, Tailwind CSS, Three.js, React Three Fiber, JUnit

Developer Tools: Git, GitLab, AWS, MongoDB, SQLite, Oracle, Figma, VS Code, IntelliJ

Graphics & 3D: OpenGL, GLSL, Unreal Engine 5, Unity, Maya, Blender
