

Brian Wonjun Lee

Philadelphia, PA | 215-294-7152 | leebwj@sas.upenn.edu | leebrian.dev | [LinkedIn](#)

EDUCATION

University of Pennsylvania

MSE in Computer Graphics & Game Technology (CGGT), Submatriculation

BA in Computer Science & Design (Double Major), Benjamin Franklin Scholars

Relevant Coursework: User Experience (UX) and User Interface (UI) Design, Interactive Computer Graphics, Computer Animation, 3-D Computer Modeling, Interactive Concepts for Art & Design

Philadelphia, PA

Expected May 2028

Expected May 2027

EXPERIENCE

Software Engineer Intern, Aleph Lab (Y Combinator)

June 2026 – Aug 2026 · San Francisco (Remote)

- **Made a full rebrand cost users nothing to relearn** — information architecture shipped first (speaking practice got its own destination instead of a banner buried under the home feed), so the layout was already familiar when the 33-section visual system flipped on, staged **25→50→100%** across real class cycles
- **Unblocked a population that structurally could never have seen the new design** — the rollout flag was scoped by user email, which cannot resolve before sign-in, so the app's own login and first-class screens were invisible to exactly the first-time users they exist for
- **Stopped the interface telling parents their child had done nothing when the network had failed** — two dashboard screens drew a failed request identically to an empty one; a crash got a branded recovery in warm Korean and English where a blank white screen had been
- **Kept one design across the sign-in boundary** — anonymous onboarding re-buckets a user at login, which on a partial rollout would have flipped the design mid-journey, until I turned on experience continuity
- **Made design-to-code a repeatable process instead of a hand-rebuild** — a deterministic **Figma-to-React-Native pipeline** shipped as a skill any engineer can run, a readiness gate that turns mid-build surprises into scoped work up front, and a dev gallery the designer signs off every transient state in
- **Reset onboarding priorities** by surfacing a mobile drop-off at **roughly half the desktop activation rate** in trial data nobody had segmented that way

Software Engineer Intern, BitMango (Puzzle1 Studio)

June 2025 – Aug 2025 · Pangyo, South Korea

- **Kept 50+ live Unity mobile titles shipping** across a summer of releases, holding UI/UX and gameplay stable
- **Cleared 100+ QA-reported bugs into production**, in Unity prefabs and C# across a portfolio no single engineer owned
- **Kept the portfolio compliant and in the stores** through a platform requirement change, upgrading SDKs fleet-wide

Project Lead & Product Designer, Penn Spark

Jan 2025 – Present · Philadelphia, PA

- **Shipped client-facing 0-to-1 products** leading a cross-functional team of **15+** designers and developers
- **Made design decisions once instead of per-person**, defining the end-to-end flows and reusable interface systems the team built inside
- **Delivered on every semester-long client cycle**, brief to user-tested release

PROJECTS

Path@Penn Redesign | Figma

Feb 2026 – Mar 2026

- **Made course registration something students plan in rather than fight** — Penn's portal across **4 connected surfaces**, against visual overload and fragmented workflows
- **Grounded every change in observed behaviour** — walkthroughs, interviews and a heuristic audit, then a usability-tested hi-fi prototype

Penn Spark Website Redesign | Figma, Next.js, React

Sept 2025 – Dec 2025

- **Put the club's public site live at pennspark.org** — rebuilt from an ageing Gatsby stack to Next.js + React with a content system the team updates without an engineer, leading design across **10+** designers and developers

Wikipedia Mobile Redesign | Figma

Apr 2026

- **Redesigned Wikipedia mobile around how people actually read it** — 5 sections built on **3 reader personas** from structured interviews and a survey
- **Let testing overrule my instincts** — previews, search snippets and clearer AI framing all came from sessions with 4 participants, not the original design

SKILLS

Design: Product Design, UX/UI, Interaction Design, User Research, Usability Testing, Rapid Prototyping, Information Architecture, Design Systems

Engineering: TypeScript, JavaScript, React, Next.js, React Three Fiber, Node.js, C++, OpenGL/GLSL, Python, SQL

Tools: Figma, Photoshop, Illustrator, After Effects, Premiere Pro, Maya, Blender, Unreal Engine 5, Unity, Git
