EDUCATION

University of Pennsylvania — Philadelphia, PA
MSE in Computer Graphics & Game Technology (CGGT), Submatriculation — *Expected May 2028*
BA in Computer Science & Design (Double Major), Benjamin Franklin Scholars — *Expected May 2027*
Relevant Coursework: Human-Computer Interaction, User Experience (UX) & User Interface (UI) Design, Interactive Computer Graphics, Computer Animation, 3-D Computer Modeling, Interactive Concepts for Art & Design, Algorithms

EXPERIENCE

Software Engineer Intern, Aleph Lab (Y Combinator) — *June 2026 – Aug 2026 · San Francisco (Remote)*

- Delivered a full rebrand users did not have to relearn, shipping the information architecture first, live to **100% of users**, so the layout stayed familiar before the **33-section** visual system followed, staged **25→50→100%** across real usage cycles
- **Cut the designer-to-engineer handoff out of the loop:** a pipeline that turns **Figma designs into React Native components** exactly as drawn, packaged so any engineer on the team can run it
- **Gave the AI character a consistent voice in the interface:** its message-bubble system across the home experience, plus a branded crash recovery and shared error states in warm, kid-appropriate English and Korean
- **Reset onboarding priorities** by surfacing a mobile drop-off at **roughly half the desktop activation rate** in trial data nobody had segmented that way, which redirected where the team looked next

Project Lead & Product Designer, Penn Spark — *Jan 2025 – Present · Philadelphia, PA*

- Led a team of **15+** designers and developers shipping new products for real clients, from first concept to launch
- Defined the end-to-end user flows and reusable interface systems the team shipped across multiple client deliverables

Software Engineer Intern, BitMango (Puzzle1 Studio) — *June 2025 – Aug 2025 · Pangyo, South Korea*

- Improved UI/UX and core gameplay stability across **50+ live Unity titles** in a **420M+ download** portfolio
- Shipped fixes for **100+ bugs** raised by QA and player reports, correcting Unity prefabs and C# scripts in production
- Kept all 50+ titles live on the app stores by upgrading SDKs and platform modules as requirements changed

Database Engineer Intern, IT-Farm — *June 2022 – Aug 2022 · Seongnam, South Korea*

- Designed and implemented a SQL database prototype managing **1M+ data entities** using Oracle and SQLite
- Processed and organized semiconductor datasets from **20+ client companies**, including Samsung, SK, and LG

Teaching Assistant, Computer Graphics, University of Pennsylvania — *Sept 2026 – Present · Philadelphia, PA*

- Grade C++/OpenGL assignments, projects and midterms for CIS 4600/5600, Interactive Computer Graphics
- Hold office hours on C++ debugging, 3D transformations, scene graphs and rendering, and review student code to show where an implementation breaks and why

PROJECTS

Wikipedia Mobile Redesign | *Figma* — *Apr 2026*

- **A redesign of Wikipedia's mobile app around how people actually read it: 5 sections** (Home, Article, Search, Language, AI Chat) built on **3 reader personas** from interviews and a survey
- **Let testing overrule my instincts:** previews, search snippets and clearer AI wording all came from usability sessions with 4 readers, not from my original design, and the shipped screens kept what tested well

Path@Penn Redesign | *Figma* — *Feb 2026 – Mar 2026*

- **A redesign of Penn's course-registration portal: 4 connected screens** (Dashboard, Course, Schedule, Degree) rebuilt around how students actually plan a semester, from course search to the four-year degree view
- **Grounded in research rather than taste:** student interviews, observed walkthroughs and an audit of the live portal's pain points, then a usability-tested prototype of the flow across all four screens

Capsule | *Blender, Spline, Figma* — *Jan 2025 – Apr 2025*

- **A shared time capsule you open in 3D:** photos and messages stay locked until a chosen date, then open in a browser gallery (team of 8)
- **Designed the app's 3D visual language and its interface** as one of four designers, modeling the capsule and gallery scenes in Blender and Spline

SKILLS

Design: Product Design, UX/UI, Interaction Design, User Research, Usability Testing, Wireframing, Rapid Prototyping, Information Architecture, Design Systems, Design Tokens, Accessibility, Journey Mapping
Engineering: TypeScript, React, Next.js, React Native (Expo), Node.js, C++, OpenGL/GLSL, Python, SQL, Git, Docker, GitHub Actions
Tools & AI: Figma (+ Figma MCP), Photoshop, Illustrator, After Effects, Premiere Pro, Maya, Blender, PostHog, Claude Code, Codex, MCP
Practices: Design systems & tokens, feature-flagged rollout, usability testing, design-to-code handoff, cross-functional leadership
