

Brian Wonjun Lee

Philadelphia, PA | 215-294-7152 | leebwj@sas.upenn.edu | leebrian.dev | [LinkedIn](#)

EDUCATION

University of Pennsylvania

MSE in Computer Graphics & Game Technology (CGGT), Submatriculation

BA in Computer Science & Design (Double Major), Benjamin Franklin Scholars

Relevant Coursework: User Experience (UX) and User Interface (UI) Design, Interactive Computer Graphics, Computer Animation, 3-D Computer Modeling, Interactive Concepts for Art & Design, Introduction to Algorithms

Philadelphia, PA

Expected May 2028

Expected May 2027

EXPERIENCE

Software Engineer Intern, Aleph Lab (Y Combinator)

June 2026 – Aug 2026 · San Francisco (Remote)

- Delivered a full rebrand users did not have to relearn, shipping the information architecture first — live to **100% of users** — so the layout stayed familiar before the **33-section** visual system followed, staged **25→50→100%** across real usage cycles
- Cut the designer-to-engineer handoff out of the loop** — a deterministic **Figma-to-React-Native pipeline** turning designs into tokenized Expo components, shipped as a reusable Claude skill any engineer can run
- Gave the AI character a consistent voice in the interface** — its message-bubble system across the home experience, plus a branded crash recovery and shared error states in warm, kid-appropriate English and Korean
- Reset onboarding priorities** by surfacing a mobile drop-off at **roughly half the desktop activation rate** in trial data nobody had segmented that way, which redirected where the team looked next

Software Engineer Intern, BitMango (Puzzle1 Studio)

June 2025 – Aug 2025 · Pangyo, South Korea

- Maintained a live portfolio of **50+ Unity mobile game titles**, improving UI/UX and core gameplay stability across releases
- Resolved **100+ QA-reported bugs** by modifying Unity prefabs and C# scripts, shipping fixes in production releases
- Upgraded SDKs and platform modules fleet-wide to meet app-store requirements and sustain availability

Project Lead & Product Designer, Penn Spark

Jan 2025 – Present · Philadelphia, PA

- Led a cross-functional team of **15+** designers and developers to ship client-facing **0-to-1 products**
- Defined end-to-end user flows, interaction patterns, and reusable interface systems across multiple deliverables
- Shipped polished, user-centered features across semester-long client project cycles

Military Interpreter, Capital Defense Command (ROK Army)

Dec 2022 – June 2024 · Seoul, South Korea

- Provided real-time English–Korean interpretation in high-security, multi-agency environments for international stakeholders
- Translated sensitive documents and briefings with precision, enabling coordination across government and defense teams

Database Engineer Intern, IT-Farm

June 2022 – Aug 2022 · Seongnam, South Korea

- Designed and implemented a SQL database prototype managing **1M+ data entities** using Oracle and SQLite
- Processed and organized semiconductor datasets from **20+ client companies**, including Samsung, SK, and LG
- Wrote and optimized SQL queries to improve retrieval and management efficiency across large-scale datasets

PROJECTS

Wikipedia Mobile Redesign | Figma

Apr 2026

- Redesigned Wikipedia mobile around how people actually read it** — 5 sections (Home, Article, Search, Language, AI Chat) built on **3 reader personas** drawn from structured interviews and a reader survey
- Let testing overrule my instincts** — previews, search snippets and clearer AI framing all came from moderated usability sessions with 4 participants, not from the original design or my own preference

Path@Penn Redesign | Figma

Feb 2026 – Mar 2026

- Made course registration something students plan in rather than fight** — Penn's portal across **4 connected surfaces** (Dashboard, Course, Schedule, Degree), against visual overload and workflows split across tools
- Grounded every change in observed behaviour** — observational walkthroughs, student interviews and a heuristic audit of the live portal, then a usability-tested hi-fi Figma prototype of the full flow

Penn Spark Website Redesign | Figma, Next.js, React

Sept 2025 – Dec 2025

- Put the club's public site live at pennspark.org**, rebuilt from an ageing Gatsby stack to Next.js + React with a data-driven content system the team updates each semester without an engineer in the loop
- Made it findable** — restructured navigation and page hierarchy so the club's work is discoverable to prospective members and clients, leading design direction across **10+** designers and developers

SKILLS

Design: Product Design, UX/UI, Interaction Design, User Research, Usability Testing, Wireframing, Rapid Prototyping, Information Architecture, Design Systems, Design Tokens, Accessibility, Journey Mapping

Engineering: TypeScript, React, Next.js, React Native (Expo), Node.js, C++, OpenGL/GLSL, Python, SQL, Git, Docker, GitHub Actions

Tools & AI: Figma (+ Figma MCP), Photoshop, Illustrator, After Effects, Premiere Pro, Maya, Blender, PostHog, Claude Code, Codex, MCP

Practices: Design systems & tokens, feature-flagged rollout, usability testing, design-to-code handoff, cross-functional leadership
