

Brian Wonjun Lee

Philadelphia, PA | 215-294-7152 | leebwj@sas.upenn.edu | leebrian.dev | [LinkedIn](#)

EDUCATION

University of Pennsylvania

MSE in Computer Graphics & Game Technology (CGGT), Submatriculation
BA in Computer Science & Design (Double Major), Benjamin Franklin Scholars

Philadelphia, PA
Expected May 2028
Expected May 2027

Relevant Coursework: Interactive Computer Graphics, Computer Animation, 3-D Computer Modeling, Introduction to Algorithms, Introduction to Computer Systems, Programming Languages & Techniques

EXPERIENCE

Software Engineer Intern, Aleph Lab (Y Combinator)

June 2026 – Present · San Francisco (Remote)

- Architected a typed integration SDK that packaged a **production AI agent** as an installable service — 5 versioned wire contracts (zod, JSON Schema, **136 tests**); a fresh AI coding agent integrated a new environment to green in **0 fix-loops**
- Built a **Python multi-agent tool on the Claude Agent SDK** that mined production data via read-only MCP — diagnosed a reported retention gain as a measurement artifact and surfaced the real churn drivers, **reshaping the team's roadmap**
- Shipped to production a recency-segmented retention engine (Supabase, Deno, FCM) with a **treatment/holdout A/B**, driving the product's **first measured win-back → paid conversion**
- Worked across the **LLM product stack** — agent orchestration, MCP tool integration, and config-driven AI modes — at a 4-engineer YC startup

Software Engineer Intern, BitMango (Puzzle1 Studio)

June 2025 – Aug 2025 · Pangyo, South Korea

- Maintained a live portfolio of **50+ Unity mobile game titles**, improving UI/UX and core gameplay stability across deployments
- Resolved **100+ QA-reported bugs** by modifying Unity prefabs and C# scripts, shipping fixes in production releases
- Upgraded SDKs and platform modules **fleet-wide** to meet evolving app-store requirements and sustain production availability

Project Lead & Product Designer, Penn Spark

Jan 2025 – Present · Philadelphia, PA

- Led a **15+-person cross-functional team** of designers and developers to ship client-facing **0-to-1 products**
- Defined **end-to-end user flows**, interaction patterns, and reusable interface systems across multiple deliverables
- Shipped polished, **user-centered features** across semester-long client project cycles

Military Interpreter, Capital Defense Command (ROK Army)

Dec 2022 – June 2024 · Seoul, South Korea

- Provided **real-time English-Korean interpretation** in high-security, multi-agency environments for international stakeholders
- Translated **sensitive documents and briefings** with precision, enabling coordination across government and defense teams

Database Engineer Intern, IT-Farm

June 2022 – Aug 2022 · Seongnam, South Korea

- Designed and implemented a SQL database prototype managing **1M+ data entities** using Oracle and SQLite
- Processed and organized semiconductor datasets from **20+ client companies**, including Samsung, SK, and LG
- Wrote and **optimized SQL queries** to improve retrieval and management efficiency across large-scale datasets

PROJECTS

CareerOS | TypeScript, Node.js, LLM/Agent tooling, Astro

2026

- Built an **AI-assisted career platform**: automated role sourcing across **~110 ATS boards** surfacing 5,000+ live roles
- Engineered deterministic fit-ranking and a **cross-device application tracker** with live Google Sheet sync
- Shipped an **agentic morning-brief** and answer-drafting assistant — a personal career operating system

Mini Minecraft | C++, OpenGL, GLSL

Apr 2026

- Engineered a **voxel engine from scratch**: 7 procedural biomes from layered Perlin/FBM/Voronoi noise with smoothstep blending
- Implemented **3D Perlin cave systems** with trilinear interpolation, fluid physics, and post-process tint overlays
- Built the render pipeline: **7×7 PCF soft shadows**, **screen-space reflections**, **vertex AO**, and a dynamic day-night cycle

Capsule | React, Three.js (R3F), MongoDB, AWS S3

Jan 2025 – Apr 2025

- Built a **full-stack web app** (team of 4) for creating interactive 3D time capsules with media storage and timed unlocking
- Engineered immersive 3D scenes with **React Three Fiber** for real-time rendering, animation, and direct-manipulation interaction
- Designed the backend with **MongoDB** and scalable media storage on **AWS S3**, wiring authentication and timed-release logic

TECHNICAL SKILLS

AI & Agents: Claude Agent SDK, MCP, LLM APIs (Anthropic/Gemini), agent orchestration, prompt engineering

Languages: Python, TypeScript, JavaScript, C++, C#, SQL

Frameworks & Tools: React, Next.js, Node.js, Supabase, Deno, Git, GitLab, AWS, MongoDB, Figma
